

HQ HomeBrew Map Pack for **HEROQUEST**

Derived from Mage Knight Dungeon Kits

HQ HomeBrew Map Pack for **HEROQUEST** Derived from **MAGE KNIGHT Dungeons**

In 2004 Wizkids produced the Mage Knight Dungeons Builder's kits for their collectible pre-painted miniatures game Mage Knight Dungeons. At first look the tiles are too large to be easily incorporated into a standard HeroQuest board. But, where there is a won't, there is a will. Being a glutton for punishment and a possessing a desire to expose my Heroes to new and dangerous situations, I set about collecting all 3 sets. I then scanned the tiles and resized them. Next came the removal of the various printed numbers and letters on the tiles. The results of that effort are on the following pages. Each page is a single tile, with 2 exceptions. When you print this PDF do so with the settings to normal, do not allow the program to adjust page size and the tiles should fit the board. You will need to cut them out though.

There are 29 original tiles in the 3 packs, several were repeated to allow for some minor variation. There is only one of each tile in this file. You can print multiple individual pages if you like.

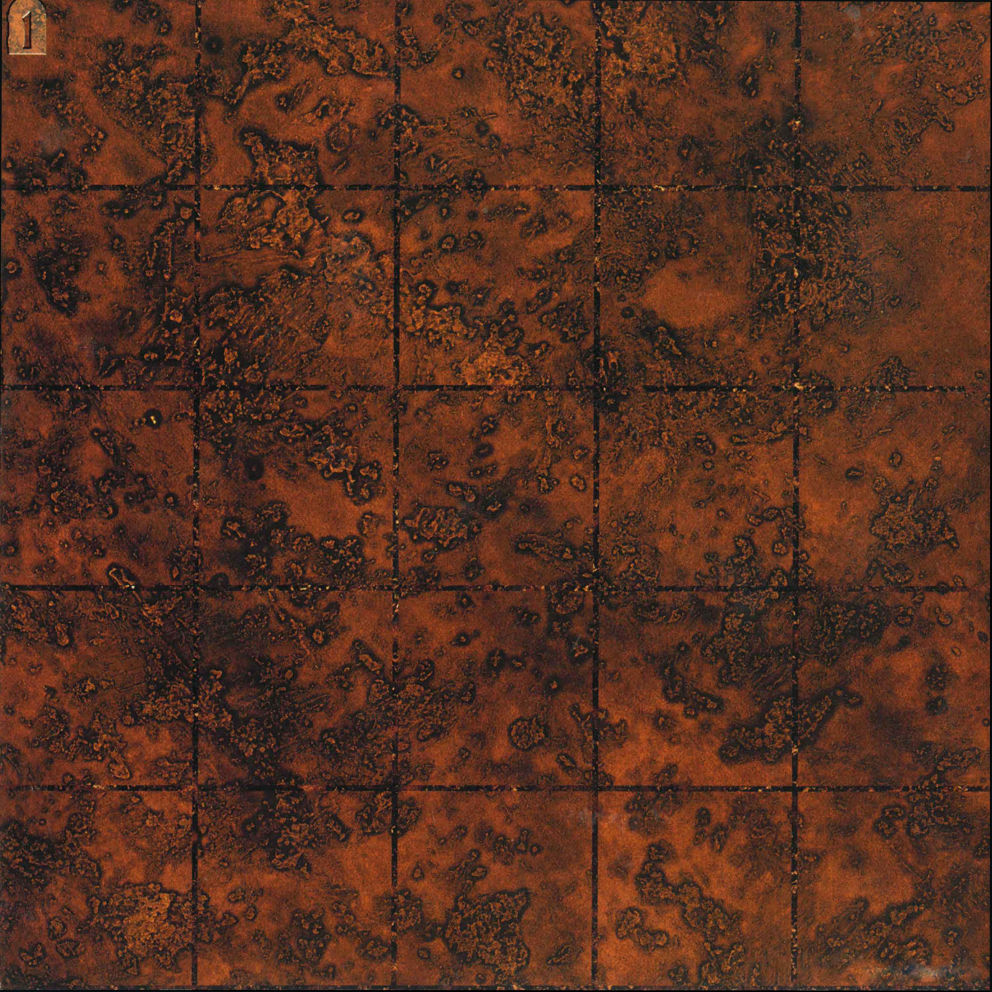

Of the remaining 11 tiles, 6 are derived from a few of the previous 29 tiles. 5 are original tiles derived from the art work behind the blister packs on the front of the packaging for the Dungeon Builder's kits.

Ebay seems to be the most common place to find these items currently, though I have seen them in the odd game store over the years. With this map Pack you can have all the fun with out the frustration of doing all the work. However if you are interested in tracking them down I have included some images of what you will be looking for so that you don't accidentally purchase 2 of the same kit.

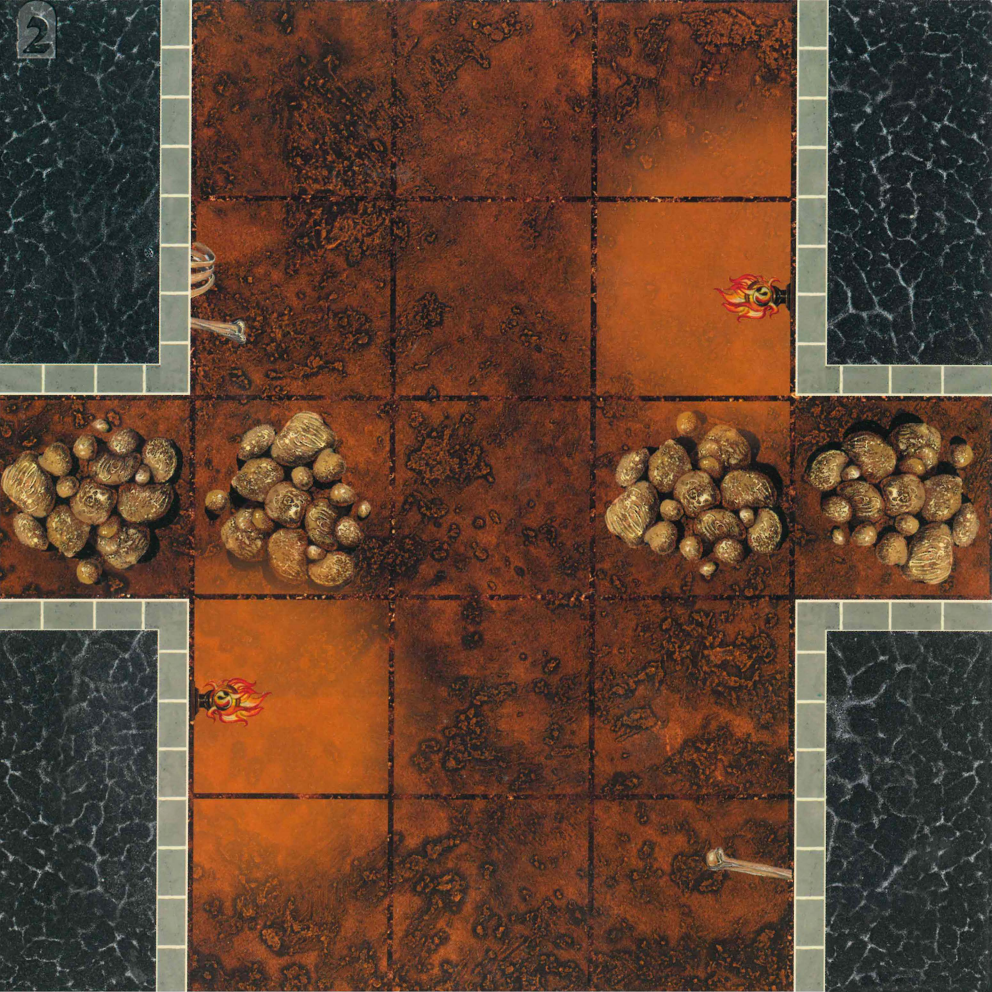

Each kit has a quantity of “bones” in the upper left corner denoting the kit number. There is also a statement located beneath the bottom edge of the blister pack stating the kit. Useful to know if the top has been removed.

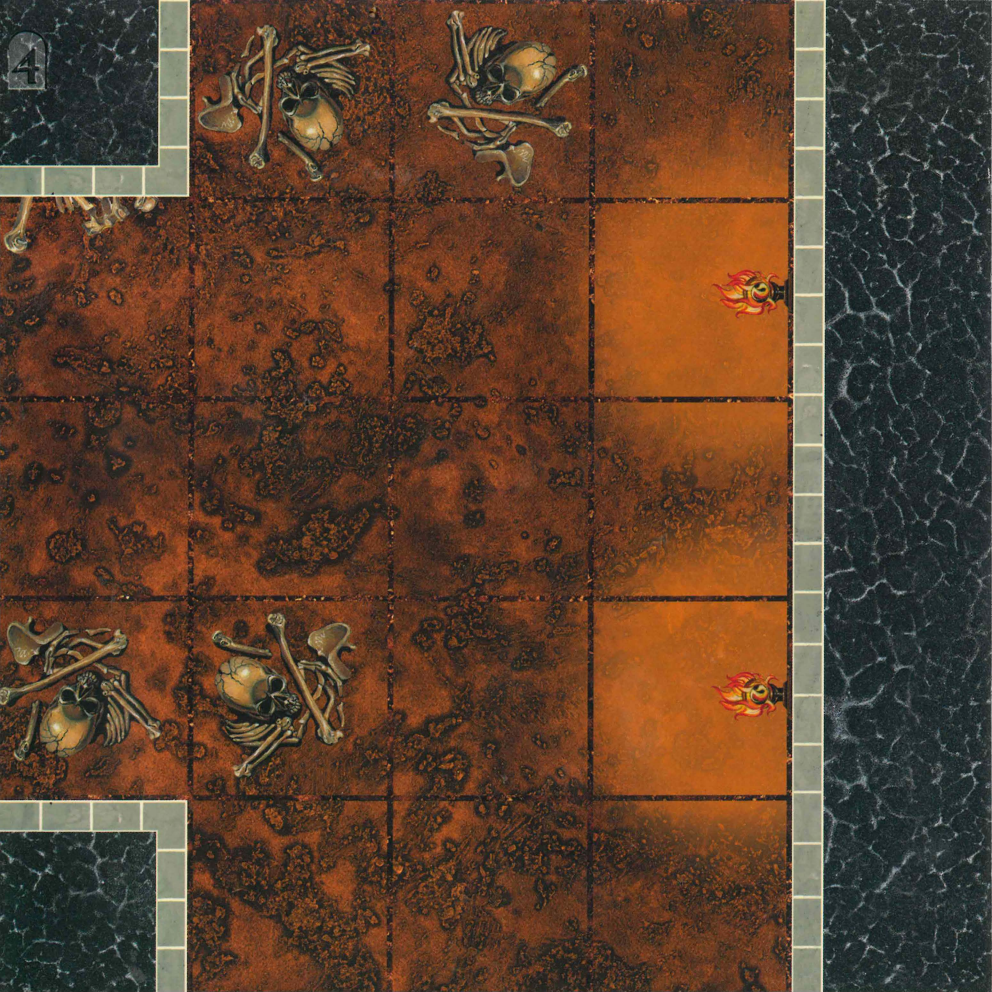

The thing that drew my attention to these kits first was the 4 doors in each each kit. These are fully hinged and functional doors that work surprisingly well. There are 3 “wood” doors and 1 “iron” door in each kit. They come fully painted. Their only drawback is the small foot print on either side of the door. This makes them fairly unstable and susceptible to being knocked over. At some point I will do an article on them and how I make them more stable without detracting from their cool factor.
